

Listening 2 "Geology Class"

- ❖ **What is this lecture mainly about?**
 - A) A process for improving drainage systems
 - B) A comparison of different types of drainage systems
 - C) The relationship among the most common drainage systems
 - D) The changes that occur in drainage systems over time
- ❖ **Why does the professor say this:**
 - A) To remind the students of the topic for today's session
 - B) To indicate that he expects the students to read the textbook
 - C) To encourage the students to participate in the discussion
 - D) To demonstrate his respect for the students in his class
- ❖ **How does the professor introduce the dendritic drainage system?**
 - A) By demonstrating how this very old system has evolved
 - B) By comparing it to both a tree and the human circulatory system
 - C) By criticizing the efficiency of the branches in the system
 - D) By drawing conclusions about the climate in the area
- ❖ **Why does the professor mention the spokes of a wheel?**
 - A) To make a point about the stream beds in a trellis pattern
 - B) To contrast the formation with that of a rectangular one
 - C) To explain the structure of a radial drainage system
 - D) To give an example of a dendritic drainage system
- ❖ **What does the professor imply when he says this: (Audio)**
 - A) The test questions will be very difficult.
 - B) The students should read their textbooks before the test.
 - C) The basic patterns from the notes will be on the test.
 - D) The test will influence the final grade.
